

HandsMen Threads: Elevating the Art of Sophistication in Men's Fashion

Abstract

This capstone project, HandsMen Threads, focuses on leveraging the Salesforce Platform to revolutionize data management and elevate customer relations for a dynamic organization in the luxury men's fashion industry. The primary goal was to transition the business from decentralized, inefficient data processes to a robust, centralized Salesforce environment. The solution centers on building a secure and accurate custom data model while implementing four critical, real-time business automations. These automations span customer communication, loyalty management, inventory control, and financial processing, establishing a scalable foundation that ensures data integrity, enhances operational efficiency, and fosters deeper customer engagement.

Objective

The primary objective of the HandsMen Threads capstone project was to deliver a streamlined Salesforce solution focused entirely on automating the four critical business processes that drive efficiency and customer experience.

The four core deliverables of this project are:

1. **Automated Order Confirmations (CX Improvement):** Implement a real-time system to ensure customers receive an immediate, personalized email update upon post-order confirmation, fostering engagement and strengthening customer relations.
2. **Dynamic Loyalty Program (Customer Retention):** Automate the updating of customer loyalty statuses based on their purchase history, enabling the immediate application of personalized rewards and promoting essential repeat business.
3. **Proactive Stock Alerts (Operational Efficiency):** Establish a flow to automatically notify the warehouse team via email when a product's stock level drops to or below five (5) units, ensuring timely restocking and preventing costly stockouts.
4. **Scheduled Bulk Order Updates (Data Integrity):** Implement a nightly scheduled job (running daily at midnight) to systematically process bulk orders, updating financial ledger records and finalizing inventory adjustments, thus ensuring accurate, up-to-date stock levels for daily operations.

Salesforce Custom Objects

The foundation of the solution is built on these custom objects:

The screenshot shows the Salesforce Setup interface, specifically the Object Manager section. The page title is "Object Manager" with a subtitle "52+ Items, Sorted by Last Modified". A search bar labeled "Quick Find" is present. Below the header is a table listing custom objects. The table has columns for LABEL, API NAME, TYPE, DESCRIPTION, LAST MODIFIED, and DEPLOYED. The objects listed are Marketing Campaign, Inventory, HandsMen Order, HandsMen Product, and HandsMen Customer, all of which are Custom Objects and have been deployed.

LABEL	API NAME	TYPE	DESCRIPTION	LAST MODIFIED	DEPLOYED
Marketing Campaign	Marketing_Campaign__c	Custom Object		11/17/2025	✓
Inventory	Inventory__c	Custom Object		11/17/2025	✓
HandsMen Order	HandsMen_Order__c	Custom Object		11/17/2025	✓
HandsMen Product	HandsMen_Product__c	Custom Object		11/17/2025	✓
HandsMen Customer	HandsMen_Customer__c	Custom Object		11/17/2025	✓

- **HandsMen Customer Object:** Manages customer information and loyalty status
- **HandsMen Orders Object:** Tracks all customer orders and order details
- **HandsMen Products Object:** Catalog of all available fashion products
- **Inventory Object:** Manages stock levels and product availability
- **Marketing Campaigns Object:** Tracks marketing initiatives and campaigns

Salesforce Flow

This is the primary automation tool used for handling all critical, real-time business processes.

a. Order Confirmation Flow

Record-Triggered Flow that automatically sends confirmation emails when orders are confirmed

b. Low Stock Flow

Record-Triggered Flow on Inventory object that alerts warehouse team when stock levels are low

Validation Rules & Formula Fields

Used extensively to enforce data integrity, ensuring that required fields are populated and that data follows business logic.

The image shows a 'New HandsMen Order' form. The form has several fields: 'HandsMen OrderNumber', 'HandsMen Product' (with a dropdown menu showing 'T-shirt cloth'), 'HandsMen Customer' (with a search bar), 'Status' (with a dropdown menu showing '--None--'), 'Quantity', 'Total Amount' (with a dropdown menu showing '0'), and 'Customer Email' (with a text input field containing 'test@example.com'). The 'Total Amount' field is highlighted in pink, indicating a validation error. A message box says 'We hit a snag. Review the following fields: Total Amount'. The 'Save' button is disabled, and the 'Cancel' button is visible. The background shows a list of 'HandsMen Orders' with columns for 'HandsMen OrderNumber' and 'Status'.

Validation rules ensure Total Amount is positive and Customer Email follows correct format

Scheduled Flows / Scheduled Apex

Utilized for high-volume, batch-processing tasks that must occur outside of regular business hours, such as the nightly bulk order update process.

Detailed Execution of Project Phases

The project execution focused on implementing the four non-negotiable business automations which are critical to the company's daily operations.

Phase 1: Data Model Foundation

The project began with the creation of the custom object schema to reflect the relationships between customers, their orders, and the fashion products. Key relationships were established (e.g., Master-Detail between **Order** and **Order Line Item**; Lookup between **Customer** and **Loyalty Status**). Data integrity was immediately enforced via mandatory fields and appropriate data types.

Sample Data Records:

Customer record showing loyalty status (Gold) and total purchases (\$1,200)

Products catalog managing all available fashion items

Phase 2: Customer Experience Automation

A. Automated Order Confirmations (Immediate Flow)

- **Mechanism:** A Record-Triggered Flow on the Order object, set to run after the record is created.
- **Critical Logic:** The Flow checks if the order status is 'Confirmed'. Upon confirmation, the Flow immediately generates and sends a personalized email notification to the associated Customer Contact.

Email template for order confirmations with personalized fields

Actual order confirmation email sent to customer John for order #O-0002

B. Dynamic Loyalty Program Update (Record-Triggered Flow with Logic)

- **Mechanism:** A Record-Triggered Flow on the Order object, running after an order is completed/paid.
- **Critical Logic:** This Flow processes the total purchase amount and updates customer loyalty status based on predefined tiers (Bronze, Silver, Gold).

Phase 3: Operational Efficiency Automation

C. Proactive Stock Alerts (Record-Triggered Flow)

- **Mechanism:** A Record-Triggered Flow on the Product or Inventory object, set to run after a record is updated when the quantity changes.
- **Critical Logic:** The Flow evaluates the Quantity_on_Hand_c field. If this quantity drops to or below the threshold of five (5) units, the Flow executes an immediate Email Alert to the designated 'Warehouse Team'.

Proactive low stock alert for T-shirt cloth with current stock quantity of 4

Conclusion

The **HandsMen Threads** project successfully transitioned the business onto the Salesforce Platform, achieving the critical objectives of data centralization and process automation. By implementing the four core automations: order confirmation, loyalty update, stock alerts, and bulk order processing. The capstone delivered a functional, reliable, and scalable foundation for growth. The project's success is measured by the immediate improvement in customer communication quality and the robustness of the operational back-end.ss
